

IN THE CLAIMS:

Cancel claim 5.

Amend claims 1 as follows:

1. (Previously and currently Amended). An electrical hand held tool for producing at least a percussion movement of a working tool, comprising an electrical drive; a first, oscillating subassembly including a percussion mechanism (2) for transmitting the percussion movement to the working tool, and a brushless rotor (5) of the electrical drive and rotatable about a rotor axis (B) extending parallel to an oscillation path (I) of the first subassembly; and a second subassembly including a housing (6) in which the first subassembly is supported for a limited movement along a tool axis (A).
2. (Original). An electrical hand-held tool according to claim 1, wherein the first subassembly includes a transformation gear.
3. (Original). An electrical hand-held tool according to claim 1, wherein the second subassembly includes a stator (7) of the electrical drive.

4. (Original). An electrical hand-held tool according to claim 1, wherein the second subassembly includes control electronics (8) for the electrical drive.

5. (Canceled).

6. (Original). An electrical hand-held tool according to claim 1, wherein the first subassembly and the second subassembly have a substantially same mass.

7. (Previously Amended). An electrical hand-held tool according to claim 1, further comprising elastic spring means (9) for providing a vibration decoupling connection of the first subassembly with the second subassembly.

8. (Original). An electrical hand-held tool according to claim 7, further comprising a damping element (10) arranged parallel to the spring means (9).

9. (Original). An electrical hand-held tool according to claim 8, wherein the damping element is formed of a viscous elastic material.

10. (Original). An electrical hand-held tool according to claim 9, wherein the viscous elastic material has an optimal energy dissipation at an operation temperature and at an oscillation frequency of the hand-held tool.
